

# SOLO LEVELING PRD

## Overview

The Individual Development Dashboard will use a **gamification-based progression system** inspired by the rank structure in *Solo Leveling*. The goal is to make personal development more engaging, consistent, and rewarding.

Users will have daily goals across different areas, including **Spirituality, Finance, Fitness/Gym, Learning, and Quests (Goals)**. Completing all assigned goals for the day will contribute toward their overall progress and rank.

The ranking system will begin at **E Rank** and progress through **D, C, B, A, and ultimately S Rank**.

To advance to the next rank, users must consistently complete their daily goals for a defined period. For example:

- **E Rank → D Rank:** Maintain 100% daily goal completion for 2 months.
- **D Rank → C Rank:** Maintain consistent goal completion for 4 months.
- **C Rank → B Rank:** Maintain consistent goal completion for 8 months.
- **B Rank → A Rank:** Maintain consistent goal completion for 1 year.
- **A Rank → S Rank:** Maintain exceptional consistency and complete the required long-term goals for 2 years

Each rank will represent a higher level of personal development, discipline, and consistency. Users can view their **current rank, progress toward the next rank, daily completion rate, streaks, achievements, and overall development score** from the dashboard.

The system should make the user's journey feel like **leveling up in real life**, where consistent effort and discipline directly translate into progression from **E Rank to S Rank**.

## Sign Up & Onboarding

Before creating an account, the user will go through a short **Welcome & Rules** screen that introduces the purpose of the platform and clearly explains the rules, expectations, and warnings.

The onboarding should make it clear that the platform is designed for **personal development, discipline, consistency, and long-term growth**. Users should understand how the ranking and goal system works before they begin.

### 1. Welcome Screen

The first screen will welcome the user and briefly explain the concept of the platform.

### Key information:

- What the platform is about
- How personal development is tracked
- How daily goals and quests work
- How the ranking system works (**E → D → C → B → A → S**)
- How consistency affects progression

## 2. Rules & Warning

Before proceeding, users should be shown the important rules and a clear warning.

This section should explain that:

- Users are responsible for setting realistic and achievable goals.
- The platform is designed to encourage consistency and discipline.
- Users should not create unrealistic or harmful goals simply to increase their rank.
- Missing a goal may affect their progress, streak, or rank progression depending on the system rules.
- Financial information entered by the user is for **personal tracking and organization** and should not be considered financial advice.
- The user should review their goals and information carefully before starting.

The user must acknowledge the rules before continuing.

CTA: **I Understand & Continue**

## 3. Account Creation

After accepting the rules, the user can create their account.

Required information:

- **Name**
- **Email Address**
- **Password** (*if using traditional email signup*)

The user can also choose:

- **Continue with Google**
- **Continue with Apple**

## 4. Account Authentication

If the user signs up using email and password, their account will be created and they can subsequently log in using their registered credentials.

If the user signs up using **Google or Apple**, their account will be linked to that authentication provider.

Once an account has been created, the user should be able to **log in using Google or Apple** without having to create a separate account again.

## 5. First-Time Setup

After successful registration, the user will enter the initial setup flow where they can configure their personal development areas.

They can choose which areas they want to track, such as:

- **Spirituality**
- **Finance**
- **Fitness / Gym**
- **Learning**
- **Quests / Goals**

The user can then configure their initial goals and preferences.

## Overall Flow

**Welcome → Rules & Warning → Accept Rules → Sign Up → Google/Apple or Email → Account Created → Initial Setup → Create Goals → Individual Development Dashboard**

The objective is to make the onboarding experience simple while ensuring that users clearly understand the **purpose, rules, responsibilities, and gamified rank system** before starting their personal development journey.

## Finance

The **Finance** section will allow users to manage and track their personal finances, including **loans, financial goals, expenses, savings, investments, and other financial commitments**.

When creating a financial goal or tracking an expense/commitment, the user can provide the following details:

- **Title** – Name of the goal or financial activity.
- **Category** – Select from predefined categories or create a **custom category**.
- **Amount/Target** – The total amount associated with the goal or commitment.
- **Timeline** – Define the duration, such as monthly, yearly, or a custom number of months/years.
- **Start Date** – Select when the tracking should begin.

- **Target Date/Duration** – Define when the goal should be completed.
- **Frequency** – Choose whether the target needs to be tracked monthly, yearly, or based on another defined period.

Once the user sets up their financial goals and commitments, the **Finance Dashboard will automatically track their progress** based on the information provided.

## Financial Progress Tracking

For goals that have a recurring target, the dashboard will show a **checkbox for each applicable period**. For example, if a user sets a goal to repay a loan over 12 months, they will be able to mark each month's target as completed.

The dashboard will provide an overview of:

- **Total Loans**
  - Total loan amount
  - Amount already paid
  - Remaining loan amount
  - Monthly/periodic repayment progress
  - Loan completion percentage
- **Financial Goals**
  - Total target amount
  - Amount completed
  - Remaining amount
  - Progress percentage
  - Monthly/yearly completion status
- **Expenses**
  - Expenses by category
  - Monthly and yearly spending
  - Remaining budget
  - Category-wise spending progress
- **Savings & Other Goals**
  - Target amount
  - Amount saved
  - Remaining amount
  - Progress toward completion

## Category-Wise Progress

The dashboard will also provide a **category-wise financial overview**, allowing users to quickly understand where their money is going and how they are progressing toward each financial objective.

For example:

**Loans** → ₹2,00,000 remaining  
**Savings** → ₹50,000 / ₹1,00,000 completed  
**Education** → ₹30,000 / ₹50,000 completed  
**Travel** → ₹20,000 / ₹40,000 completed

This will give the user a clear visual representation of their **financial progress, outstanding commitments, completed goals, and remaining targets**.

## Gamification Integration

Finance will also contribute to the user's overall **Individual Development Rank**. Completing financial goals consistently will contribute toward their daily/monthly progress and help them advance through the **E → D → C → B → A → S Rank** system.

This makes financial discipline part of the user's overall personal development journey rather than treating Finance as a separate tracking tool.

## Spirituality

The **Spirituality** section is designed to help users build consistency in their spiritual practices, beliefs, learning, and personal growth.

Users have complete freedom to define what spirituality means to them and can create their own **categories, goals, and tasks** based on their personal beliefs and practices.

### 1. Custom Categories

Users can create and manage their own spirituality categories.

For example:

- Scripture
- Prayer
- Meditation
- Gratitude
- Spiritual Learning
- Reflection
- Worship
- Mindfulness
- Personal Growth

Users can also create **completely custom categories** based on their individual needs.

### 2. Create Goals & Tasks

Users can create any spirituality-related goal or task they want.

For example:

- Read 5 pages of scripture every day.
- Pray at specific times each day.
- Learn a new prayer or spiritual teaching.
- Meditate for 20 minutes every day.
- Read one spiritual lesson every day.
- Practice gratitude every morning.
- Attend a spiritual/religious gathering once a week.
- Memorize selected verses or teachings.

The system should not restrict users to predefined goals. **Users should be able to create goals that are personally meaningful to them.**

### 3. Goal Configuration

When creating a goal, users can define:

- **Title**
- **Category**
- **Description** (*optional*)
- **Target**
- **Frequency** – Daily, weekly, monthly, yearly, or custom
- **Start Date**
- **End Date / Duration**
- **Reminder** (*optional*)

### 4. Progress Tracking

Once a goal is created, the platform will track the user's progress.

For recurring goals, users can mark each target as completed using a **checkbox**.

For example:

**Meditate for 20 minutes every day**

- ☒ Monday
- ☒ Tuesday
- ☒ Wednesday
- ☐ Thursday
- ☒ Friday
- ☒ Saturday
- ☒ Sunday

The system will calculate:

- Current streak
- Longest streak
- Daily completion
- Weekly completion
- Monthly completion
- Overall completion percentage
- Category-wise progress
- Completed vs. pending goals

## 5. Gamification

Spirituality goals will contribute to the user's overall **Personal Development Score** and rank progression.

Consistent completion will help users progress through:

**E → D → C → B → A → S**

The ranking system should focus on **consistency, discipline, and personal growth**, rather than judging or comparing a user's beliefs or spiritual practices.

## Core Principle

**The platform provides the structure; the user defines what spirituality means to them.**

## Gym / Fitness

The **Gym / Fitness** section is designed to help users manage their nutrition, workouts, and physical progress in one place. Users should be able to create their own plans while the system automatically tracks important metrics such as calories, protein, carbohydrates, and fiber.

### 1. Meal Tracker

Users can track **as many meals as they eat throughout the day**. There should be no fixed limit to the number of meals they can add.

Examples:

- Breakfast
- Mid-morning snack
- Lunch
- Evening snack
- Dinner

- Post-workout meal
- Custom meals

Users can create their own meal names as well.

### **Adding a Meal**

For every meal, users can add all the ingredients they consumed.

For example:

#### **Lunch**

- 200g Chicken
- 150g Rice
- 100g Vegetables
- 1 tsp Olive Oil

Based on the ingredients and quantities entered, the system should calculate the meal's nutritional information, including:

- Calories
- Protein
- Carbohydrates
- Fat
- Fiber
- Other relevant nutritional values

The dashboard should then combine all meals to provide a **daily nutrition summary**.

### **Daily Nutrition Overview**

Users should be able to see:

- Total calories consumed
- Total protein
- Total carbohydrates
- Total fat
- Total fiber
- Meal-wise calorie breakdown
- Progress against their daily targets

Users can also set their own daily nutrition targets, such as a calorie or protein goal.

---

## **2. Workout Planner**

The Workout Planner will allow users to create and manage their own workout routines.

Users should be able to create:

- Daily workouts
- Weekly workout plans
- Custom workout routines
- Workout schedules
- Rest days

### **Adding a Workout**

When creating a workout, the user should be able to select:

- **Workout Name** – Select from a searchable dropdown containing common exercises.
- **Targeted Body Part** – Select from a dropdown.
- **Sets**
- **Repetitions**
- **Weight**
- **Duration** (*where applicable*)
- **Rest Time**
- **Notes** (*optional*)

Example:

**Exercise:** Bench Press

**Target:** Chest

**Sets:** 4

**Reps:** 10

**Weight:** 60 kg

## **3. Custom Workouts & Body Parts**

The system should not restrict users to the predefined exercise library.

If a workout is missing, users can select:

**+ Add Custom Workout**

and enter their own exercise name.

Similarly, if a required body part or muscle group is not available, users should be able to:

**+ Add Custom Body Part**

This ensures the workout planner remains flexible for different training styles and individual requirements.

---

## **4. Workout Progress Tracking**

The system should track workout history and performance over time.

Users should be able to view:

- Completed workouts
- Workout frequency
- Exercises completed
- Sets and repetitions
- Weight progression
- Personal records
- Workout streaks
- Weekly/monthly workout consistency

For exercises involving weights, the system can show progression over time.

For example:

### **Bench Press**

Week 1 → 50 kg

Week 2 → 55 kg

Week 3 → 60 kg

Week 4 → 65 kg

This allows users to clearly see their strength progression.

---

## **5. Body Measurements**

Users should be able to record their body measurements regularly.

They can track measurements such as:

- Weight
- Chest
- Waist
- Abdomen
- Hips

- Arms
- Thighs
- Calves
- Neck
- Body fat percentage (*if available*)

Users should be able to add custom measurements as well.

The system should display changes over time through **charts and progress indicators**.

---

## 6. Progress Pictures

Users should be able to upload progress pictures on a regular basis, such as **weekly or monthly**.

They can capture pictures from different angles, for example:

- Front
- Side
- Back

The system should organize these pictures chronologically so users can compare their physical transformation over time.

For example:

**Week 1 → Week 2 → Week 3 → Week 4 → ...**

Progress pictures should remain **private and visible only to the user** unless the product later introduces an explicit sharing feature.

---

## 7. Fitness Dashboard

The Gym / Fitness dashboard should provide a complete overview of the user's fitness journey.

It can include:

### Nutrition

- Today's calories
- Protein
- Carbs
- Fiber

- Remaining daily targets
- Meal breakdown

## Workout

- Today's workout
- Completed exercises
- Weekly workout count
- Workout streak
- Strength progression

## Body

- Current weight
- Weight change
- Body measurements
- Body fat percentage
- Progress charts

## Transformation

- Weekly/monthly progress pictures
- Measurement changes
- Fitness milestones

## Gamification Integration

Fitness activities will contribute to the user's overall **Personal Development Score, streaks, and rank progression**.

Completing planned workouts, maintaining nutrition goals, and consistently tracking fitness progress can contribute toward advancing through the overall rank system:

**E → D → C → B → A → S**

The objective is to make fitness feel like another part of the user's **real-life leveling journey**, where consistency and discipline lead to measurable progress.

## Learning

The **Learning** section is designed to help users learn new skills, complete courses, pursue studies, and achieve any personal learning objective they want to work toward.

The system should be flexible enough to support everything from learning a new professional skill to completing a course, studying a subject, or developing a personal hobby.

## 1. Create a New Learning Goal

Users can click **Create New Learning** to create a learning goal.

For example:

**Title:** Learn Video Editing

**Category:** Skills

**Start Date:** August 10, 2026

**Target Completion:** November 10, 2026

**Daily Tracking:** Yes

## 2. Learning Categories

Users can select from predefined categories such as:

- Learning
- Skills
- Study
- Design
- Technology
- Languages
- Career
- Personal Development
- Courses

Users should also be able to create **custom categories** if their learning goal does not fit into the available options.

For example:

**+ Create Custom Category → Video Production**

## 3. Learning Goal Configuration

When creating a learning goal, the user can define:

- **Title**
- **Description** (*optional*)
- **Category**
- **Start Date**
- **Target Completion Date**
- **Timeframe / Duration**
- **Daily Tracking** – Yes / No
- **Reminder** (*optional*)

The timeframe allows users to define how long they expect the learning goal to take.

For example:

### **Learn Video Editing**

Start: August 10

Target: November 10

Duration: 3 Months

## **4. Daily Tracking**

Users can choose whether they want to track their learning progress **daily**.

If **Daily Tracking = Yes**, the system will generate a daily checklist for the duration of the learning goal.

For example:

### **Learn Video Editing – August**

☒ Aug 10

☒ Aug 11

☒ Aug 12

☐ Aug 13

☒ Aug 14

☒ Aug 15

☒ Aug 16

The user can simply check the box when they complete their learning activity for that day.

If **Daily Tracking = No**, the system will simply track the overall learning goal based on its start date and target completion date.

## **5. Progress Tracking**

The Learning dashboard should show the user's progress toward each learning goal.

For example:

### **Learn Video Editing**

**Progress:** 42%

**Days Completed:** 38 / 90

**Current Streak:** 7 days

**Target Completion:** November 10, 2026

The system can also show:

- Overall completion percentage
- Daily completion rate
- Current streak
- Longest streak
- Days remaining
- Time elapsed
- Category-wise learning progress
- Active learning goals
- Completed learning goals

## 6. Multiple Learning Goals

Users can create and track **multiple learning goals simultaneously**.

For example:

### Active Learning

- Learn Video Editing — 42%
- Learn Figma — 68%
- Complete Digital Marketing Course — 25%
- Learn Spanish — 15%

This allows users to manage different areas of learning without being restricted to a single goal.

## 7. Gamification Integration

Learning goals will contribute to the user's overall **Personal Development Score and rank progression**.

Consistently completing daily learning activities will contribute to the user's streak and overall progress toward:

**E → D → C → B → A → S**

This turns learning into an ongoing part of the user's real-life leveling system and encourages users to consistently invest time in developing themselves.

### Core Principle

**The user decides what they want to learn, how they want to learn it, and when they want to complete it. The platform provides the structure, tracking, and motivation to help them stay consistent.**

## Quests / Goals

The Quests / Goals section is the most flexible module in the Individual Development Dashboard. It allows users to create, manage, and track anything they want to accomplish, whether it fits into an existing category or is a completely personal objective.

The purpose of Quests is to give users a space for goals that don't specifically belong to Spirituality, Finance, Fitness, or Learning.

### 1. Create a New Quest

Users can click Create New Quest to define a personal goal.

For example:

- Read 20 books this year.
- Build a personal portfolio.
- Start a business.
- Save for a new laptop.
- Travel to 5 new places.
- Wake up at 6 AM every day.
- Complete a personal project.
- Develop a new habit.
- Run a marathon.
- Spend more time with family.

The possibilities should be completely open-ended.

### 2. Quest Configuration

When creating a Quest, the user can define:

- Quest / Goal Title
- Description (*optional*)
- Category
- Custom Category (*if required*)
- Start Date
- Target Completion Date
- Timeframe / Duration
- Target / Milestone (*optional*)
- Daily Tracking – Yes / No
- Frequency – Daily, weekly, monthly, or custom
- Reminder (*optional*)

### **3. Custom Categories**

Users can choose from suggested categories or create their own.

Example categories:

- Personal
- Career
- Family
- Travel
- Business
- Relationships
- Habits
- Lifestyle
- Hobbies
- Other

Users can also create completely custom categories.

### **4. Daily / Recurring Tracking**

If the user chooses Daily Tracking, the system will generate a checklist for each applicable day.

For example:

Quest: Wake Up at 6 AM

- ☒ Monday
- ☒ Tuesday
- ☒ Wednesday
- ☐ Thursday
- ☒ Friday
- ☒ Saturday
- ☒ Sunday

The system will use these completions to calculate the user's consistency and streak.

For goals that don't require daily tracking, users can simply mark the overall goal or individual milestones as completed.

### **5. Milestones**

For larger goals, users can break the Quest into smaller milestones.

For example:

## Quest: Start My Own Business

### Milestones:

- ☒ Research the market
- ☒ Define the business idea
- ☒ Create a business plan
- ☐ Build the website
- ☐ Launch the product
- ☐ Get the first customer

This allows users to track meaningful progress even when the overall goal may take several months or years.

## 6. Progress Tracking

Each Quest should display:

- Overall completion percentage
- Current streak (*if recurring*)
- Longest streak
- Completed tasks
- Pending tasks
- Completed milestones
- Remaining milestones
- Days remaining
- Start date
- Target completion date

Users should be able to easily see what they have accomplished and what still needs to be done.

## 7. Quest Dashboard

The Quest dashboard can provide an overview of:

### Active Quests

- Goals currently in progress
- Progress percentage
- Upcoming deadlines

### Completed Quests

- Successfully completed goals
- Completion date

- Time taken

#### Upcoming Quests

- Goals that haven't started yet

#### Quest Progress

- Overall completion
- Current streak
- Total quests completed
- Active quests
- Category-wise progress

## 8. Gamification Integration

Quests are a major part of the platform's gamification system.

Completing quests, maintaining streaks, and achieving milestones will contribute toward the user's overall Personal Development Score and Rank.

The user's journey progresses through:

$E \rightarrow D \rightarrow C \rightarrow B \rightarrow A \rightarrow S$

The objective is to make every meaningful achievement feel like leveling up in real life.

### Core Principle

If the user can define it as a goal, they should be able to create it as a Quest.

Quests provide complete freedom for users to track goals that don't fit into the other modules, making the platform adaptable to every user's unique definition of personal growth and achievement.

### Global Date Filter & Historical View

The dashboard should include a global date filter that allows users to select any specific date or date range and view the corresponding data across the entire platform.

When a user selects a date, all dashboard modules should update simultaneously to show the data relevant to that period.

For example, if the user selects August 5, 2026, the dashboard will show the data for that particular day across:

- Spirituality — Completed and pending spiritual goals
- Finance — Financial activities, expenses, and goals tracked that day
- Gym / Fitness — Meals, calories, macros, workouts, and measurements
- Learning — Learning activities and completed daily goals
- Quests / Goals — Completed and pending quests or tasks
- Overall Progress — Daily completion percentage, streaks, and development score

Users should be able to select:

- Today
- Yesterday
- Specific Date
- This Week
- Last Week
- This Month
- Custom Date Range

## Historical Data

The system should maintain a complete history of the user's activities so they can go back to any previous date and review what they did, what they completed, and what they missed.

For example:

August 5, 2026

Overall Completion: 82%

- ☒ Spirituality — 4/5 completed
- ☒ Finance — 2/2 completed
- ☒ Fitness — Workout completed + nutrition tracked
- ☐ Learning — 1 task missed
- ☒ Quests — 3/3 completed

This gives users a day-by-day view of their personal development journey.

## Important UX Principle

The date filter should work as a global dashboard filter, meaning the user should not have to select the same date separately inside each module.

Select Date → Entire Dashboard Updates

This makes it easy for users to review their progress on any particular day and understand exactly how they performed across all areas of their life.

## Home Dashboard

The Home Dashboard will provide a centralized summary of the user's entire personal development journey. It should give the user an immediate understanding of how they are performing today, what they need to complete, and how they are progressing toward their long-term goals.

The dashboard should summarize data from all major modules:

- Spirituality
- Finance
- Gym / Fitness
- Learning
- Quests / Goals

### 1. Global Date Filter

The Home Dashboard will have a global date filter that allows users to view their development data for any specific date or date range.

Options:

- Today
- Yesterday
- This Week
- Last Week
- This Month
- Custom Date

When the date changes, all dashboard statistics and module summaries should update accordingly.

### 2. Rank & Overall Progress

The most prominent section of the dashboard should show the user's current Development Rank.

Example:

Current Rank: A

Progress to S Rank

It should also display:

- Overall development score
- Current streak
- Longest streak
- Goals completed
- Goals pending
- Overall completion percentage
- Days completed consistently
- Progress toward next rank

The user should clearly understand how close they are to leveling up.

### 3. Today's Overview

A quick summary of the user's progress for the selected day.

Today's Progress

82% Complete

| Area         | Progress |
|--------------|----------|
| Spirituality | 4/5      |
| Finance      | 3/3      |
| Fitness      | 6/7      |
| Learning     | 2/2      |
| Quests       | 4/5      |

This gives the user an immediate overview without requiring them to open each module.

### 4. Today's Tasks

The dashboard should show all important tasks that need to be completed for the selected day.

For example:

#### Today's Quests & Tasks

- ☒ Read 5 pages
- ☒ Complete workout
- ☒ Track meals
- ☐ Complete video editing lesson
- ☒ Update expense
- ☐ Complete personal quest

Users should be able to mark tasks as completed directly from the Home Dashboard.

## 5. Module Summaries

Each major section should have a compact summary card with a link to its detailed module.

### Spirituality

- Today's completion
- Current streak
- Active goals
- Category progress

View Spirituality →

### Finance

- Total outstanding loans
- Monthly financial goal progress
- Today's expenses
- Category-wise financial progress

View Finance →

### Fitness

- Calories consumed
- Protein consumed
- Workout status
- Current weight
- Fitness streak

**View Fitness →**

### **Learning**

- **Active learning goals**
- **Today's learning progress**
- **Learning streak**
- **Overall completion**

**View Learning →**

### **Quests**

- **Active quests**
- **Completed quests**
- **Pending tasks**
- **Quest progress**

**View Quests →**

## **6. Statistics & Insights**

The Home Dashboard should also provide useful statistics showing how the user is progressing over time.

**Examples:**

- **Daily completion rate**
- **Weekly completion rate**
- **Monthly completion rate**
- **Current streak**
- **Longest streak**
- **Total goals completed**
- **Total goals in progress**
- **Total goals missed**
- **Rank progression**
- **Category-wise performance**

Charts can be used to visualize trends and make progress easier to understand.

## **7. Long-Term Progress**

The dashboard should provide a high-level view of the user's long-term journey.

**For example:**

## Rank History

**E → D → C → B → A → S**

**Goals Completed: 247**

**Current Streak: 38 days**

**Best Streak: 64 days**

**Overall Completion: 91%**

This helps users see how much they have accomplished rather than focusing only on today's tasks.

## 8. Upcoming Goals & Deadlines

The Home Dashboard should also highlight important upcoming deadlines.

For example:

### Upcoming

- Complete Video Editing Course — 12 days remaining
- Loan Repayment Goal — 4 months remaining
- Read 10 Books — 3 months remaining
- Complete Personal Project — 21 days remaining

This ensures users don't lose track of their longer-term goals.

## 9. Dashboard Philosophy

The Home Dashboard should answer three questions immediately:

1. How am I doing today?
2. What do I need to do next?
3. How close am I to leveling up?

The detailed modules provide the deeper information, while the Home Dashboard acts as the command center for the user's real-life leveling journey.
